

Equestrian Arenas / Menages

From start to finish - aggregates to silica sand, Cooper Drainage Supplies will have the solutions for your equestrian needs in most areas.

Utilising both a non woven and a woven geotextile to improve the strength and drainage qualities of an arena offers many benefits.

Using woven geotextiles as a base layer beneath the aggregate offers separation and increased strength.

Using non woven geotextiles between the aggregate and Silica sand creates effective drainage and avoids fines mixing with stone rendering the drainage ineffective.
